

Visibility and Control for the world of photo imaging

 **Costs** **Savings** 

FUJIFILM SmartNet boosts profitability,
getting more from your investment and your people

Drive your business growth with full **Visibility and Control!**

Features

- ▶ Full visibility of your complete imaging estate
- ▶ Live data for informed decision-making
- ▶ Real-time uptime monitoring
- ▶ Efficient operations management via remote alert system
- ▶ Proactive retail management reporting
- ▶ Software version reporting tool

FUJIFILM SmartNet offers an effective platform that brings **Visibility** and **Control** to your entire business estate. Access live data via the Internet to view performance and information on all types of equipment ranging from hardware and peripherals to components, from multiple stores right down to individual units. FUJIFILM SmartNet enables you to generate the maximum potential from your investments.

Visibility

Know how your equipment is performing. Measure, monitor and contrast performance store by store. Hourly sales, daily uptimes, under-performing stores can all be identified at the click of a button, allowing you to track improvements and focus on priorities.

Control

No more waiting for issues to be phoned in. Now your equipment can raise its own alarms with automatic remote alerts by Email or SMS. Specify the rules and the recipients to suit your requirements. FUJIFILM SmartNet can reduce engineer visits and downtime by tracking faults as and when they occur, therefore enabling you to pinpoint and resolve issues prior to the event.
